

THE AMENDMENT

In the Claims

Please amend the claims as follows.

1. (Previously presented) An apparatus, comprising:
 - (a) a filter body dimensioned to fit within an inlet and forming a trough obstructing at least a portion of said inlet;
 - (b) a filter body support dimensioned and adapted to cooperatively engage with said inlet and with said filter body to substantially maintain said filter body in a pre-selected shape and position within said inlet;
 - (c) one or more connectors removably connecting said filter body to said filter body support; and
 - (d) one or more fluid displaceable adsorbent containers within said filter body.
2. (Original) The apparatus of Claim 1 wherein said filter body forms a trough along at least a portion of one wall of said inlet.
3. (Original) The apparatus of Claim 1 wherein said filter body forms a trough around the perimeter of the inside wall of said inlet.
4. (Previously presented) The apparatus of Claim 1 wherein said one or more fluid displaceable adsorbent containers comprise one or more adsorbent pouches removably connected to the interior of said filter body.
5. (Previously presented) The apparatus of Claim 1 whereby said one or more fluid displaceable adsorbent containers float as said filter body fills with fluid.
6. (Previously presented) The apparatus of Claim 5 whereby said one or more fluid displaceable adsorbent containers float at or near the fluid surface within the filter body.

Claims 7-9 (Canceled)

10. (Currently amended) ~~The~~ A catch basin filtration system ~~of Claim 8 further,~~
comprising:
a filter body dimensioned to fit within an inlet and obstructing at least a portion of
said inlet, said filter body comprising a porous material, and wherein said
filter body forms a trough around the perimeter of an inside wall of said inlet;
one or more fluid displaceable adsorbent containers within said filter body, wherein
said one or more fluid displaceable adsorbent containers comprise one or
more adsorbent pouches removably connected to the interior of said filter
body;
a filter body support dimensioned and adapted to cooperatively engage with said inlet
and with said filter body to substantially maintain said filter body in a pre-
selected shape and position within said inlet; and
one or more connectors removably connecting said filter body to said filter body
support;
~~wherein said filter body forms a trough around the perimeter of an inside wall of said~~
~~inlet.~~

Claims 11-12 (Canceled)

13. (Currently amended) ~~The~~ A catch basin filtration system ~~of Claim 7 further,~~
comprising:
a filter body dimensioned to fit within an inlet and obstructing at least a portion of
said inlet, said filter body comprising a porous material;
one or more fluid displaceable adsorbent containers within said filter body; and
one or more filter body support brackets dimensioned and adapted to cooperatively
engage with said filter body to substantially maintain said filter body in a pre-
selected shape and position within said inlet.

14. (Previously presented) The catch basin filtration system of Claim 13 wherein said one or more support brackets are configured to traverse the filter body in an X shape.

Claims 15-16 (Canceled)

17. (Currently amended) ~~The~~ A method of Claim 16 separating contaminants from storm runoff comprising the steps of:
- (a) retaining said runoff in a catch basin filtration system, said system comprising a filter body dimensioned to fit within an inlet and forming a trough obstructing at least a portion of said inlet; said filter body comprising a porous material; and
 - (b) exposing said runoff to one or more fluid displaceable adsorbent containers within said filter body, whereby said one or more fluid displaceable adsorbent containers float at or near the fluid surface within the filter body as runoff is processed through said system.

Claims 18-22 (Canceled)

23. (Previously presented) A catch basin filtration system, comprising:
- (a) a filter body dimensioned to fit within an inlet and forming a trough obstructing at least a portion of said inlet;
 - (b) a filter body support dimensioned and adapted to cooperatively engage with said inlet and with said filter body to substantially maintain said filter body in a pre-selected shape and position within said inlet;
 - (c) one or more connectors removably connecting said filter body to said filter body support; and
 - (d) one or more fluid displaceable adsorbent pouches removably connected to the interior of said filter body, whereby said one or more fluid displaceable adsorbent pouches float at or near the fluid surface within the filter body as said filter body fills with fluid.

24. (Previously presented) The catch basin filtration system of Claim 23 further comprising:
- (e) a filter body positioning element situated along at least a portion of the perimeter of the filter body.
25. (Previously presented) The catch basin filtration system of Claim 24 wherein said filter body positioning element comprises an inflatable member urged against an inside wall of said inlet and securing said filter body in position.
26. (Previously presented) A catch basin filtration system adapted for separating contaminants from storm runoff and dimensioned to fit within a catch basin, said catch basin filtration system comprising one or more fluid displaceable adsorbent containers.
27. (Previously presented) The catch basin filtration system of Claim 26 wherein said one or more fluid displaceable adsorbent containers removably attach to the remainder of said catch basin filtration system.

Claim 28 (Canceled)
